Executive Summary

Background

The US Pharmaceutical (US Pharma) FY12 revenues were \$97.5 billion, which represents 79% of McKesson's total revenue and 83% of EBIT. US Pharma services over 40,000 customers spanning retail national accounts, independent retail pharmacies, and institutional providers (such as hospitals, health systems, integrated delivery networks, and long-term care providers). The distribution network is comprised of 31 (28 forward, 2 regional, 1 strategic) distribution centers (DCs) located in 30 states divided into four regions.

Controlled substances are defined as drug or other substance, or immediate precursor, included in DEA schedule I, II, II, IV, and V. The schedules are assigned by the DEA based on the potential for abuse and medical use. US Pharma distributes controlled substances for both US Pharma and the McKesson Medical-Surgical (MMS) business unit. In FY12 US Pharma distributed approximately 5.1 million lines of controlled substance orders resulting in \$1.1 billion in sales, and MMS distributed 3,300 lines resulting in \$637,000 in sales.

US Pharma enhanced its Controlled Substance Monitoring Program (CSMP) in connection with the U.S. Drug Enforcement Administration (DEA) agreement entered into on May 2, 2008. This agreement requires McKesson to establish a compliance program designed to detect and prevent the diversion of controlled substances as stipulated under the Controlled Substances Act and applicable DEA regulations. The CSMP includes policies and procedures, automated controls and Directors of Regulatory Affairs (DRAs) appointed to oversee the program across the DC network.

Thresholds are established and monitored for each customer within SAP. They are determined by analyzing a customer's controlled substance purchase history and are authorized and assigned at on boarding. Orders that attempt to exceed a threshold are flagged and omitted from a shipment in SAP. DC management contacts customers to obtain reasons for threshold incursions, inquire about any business changes, and document the results. Customers may request a re-evaluation or increase to their existing controlled substance thresholds due to business requirements and/or an emergency situation. All threshold change requests must be documented, reviewed and approved by the appropriate DRA. Finally, ad hoc analytics are performed by each DRA for each market and customer base to support the CSMP.

Scope and Objectives

Internal Audit conducted an audit of the CSMP to assess the adequacy of, and compliance with, policies and procedures. The scope was limited to the US Pharma DC operations, including shipments by US Pharma to McKesson Medical-Surgical (MMS) customers. The audit period covered April 1, 2012 through September 15, 2012 and included the DCs located in Santa Fe Springs, CA; Delran, NJ; and Lakeland, FL.

Our objectives include, but are not limited to:

- Evaluate the effectiveness of the processes related to on-boarding new customers and assigning controlled substance thresholds;
- Validate that adequate controls have been implemented to monitor established thresholds and make modifications, as needed;
- Assess that procedures to identify, monitor, and report controlled substance orders to the DEA are adequate; and
- Validate that clear guidelines exist to determine and enforce the retention period for CSMP documentation.

Overall Conclusion

Green – Satisfactory

Based on the testing performed to meet our audit objectives, we conclude that controls to on-board new customers, assign and monitor thresholds, and report suspicious orders to the DEA are effective. However, the application of policies and procedures across the BUs and customer segments could be improved. Improvement was realized overall in the FY13 Internal Audit as compared to FY09 issues identified.

Issues have been communicated to the appropriate level of management and action plans have been obtained to address the risks noted.

Key Issues

Policies and procedures to document threshold reasoning and customer correspondence are not consistently followed for Retail National Accounts (RNA)/Chain Stores and institutional provider customer segments. RNA/chain and institutional provider segments represent two of three customer segments for US Pharma. Although thresholds are established for RNA customers and follow-up is performed when thresholds are met, customer questionnaires are not consistently completed at on-boarding, and threshold incursions are not documented. The McKesson sales representatives for RNA/chain and institutional providers are responsible to perform all customer communication and follow-up.

The Controlled Substance Monitoring Program (CSMP) policy requires the sales representative to complete a customer questionnaire during the on-boarding process. Additionally, outreach to each customer is required when a controlled substance order is omitted.

Controlled Substance Monitoring Program Audit
January 24, 2013

Management Action Plan

Management will ensure that a questionnaire is completed for all customer types as indicated in the CSMP policy.

Management will ensure that customer correspondence, noting the reason for a threshold incursion, is completed for all customer types as indicated in the CSMP policy.

Management will work with the Regulatory Affairs group to revise the questionnaire(s) and the CSMP policy (if deemed necessary) so that the documents are better tailored to RNA/chain and institutional providers.

Audit Committee Summary

US Pharma implemented enhancements to the Controlled Substance Monitoring Program (CSMP) in June 2008 to detect and prevent diversion of controlled substances. The CSMP includes policies and procedures, automated controls and Directors of Regulatory Affairs (DRAs) appointed to oversee the program across the DC network.

Controls to on-board new customers, assign and monitor thresholds, and report suspicious orders to the DEA are effective. However, the application of policies and procedures across the BUs and customer segments could be improved.

Issues have been communicated to the appropriate level of management and action plans have been obtained to address the risks noted.
